LICEO "P. NERVI – G. FERRARI"

About us

Liceo P. Nervi- G. Ferrari is a high school situated in Lombardy, in the district of Sondrio. Morbegno, where the high school is, lies in Valtellina, a valley renowned for its tourist attractions in connection with the mountains surrounding the city. In summer you can go hiking or trekking along the numerous paths, while in winter you can decide to spend a day in one of the numerous ski-areas we have. Some of them are really very famous and host international skiing competitions.

Morbegno has about 13,000 inhabitants, there is a train station which allows you to easily reach other important cities: in just 90 minutes you are in Milan and there you can find connections for other famous cities. If you want to visit Switzerland, you need to catch a bus and in less than two hours you are in St. Moritz. If you are attracted to the lake, you can reach it in different ways: there is a long cycling path which you can take to reach Lake Como in half an hour or if you prefer driving, you need just 15 minutes.

Our courses

Liceo P. Nervi- G. Ferrari has been ranked for the third time by *EDUSCOPIO (Agnelli Foundation)* as the best-performing school in Italy specifically for the course of study "Scienze Applicate". This course of study provides students with particularly advanced skills in studies related to science and technology, with particular attention to STEM.

Our school is open to students aged 14-19 and offers a great variety of experiences available in our different courses. Each course implies that the students follow a national curriculum which lasts five years. They study a great variety of topics according to their own interests and attitudes.

Here is a brief description of the five courses of study our school offers. Each one is five years long:

"Liceo Scientifico" combines scientific knowledge with a humanistic one. It provides complete education, which includes Latin and Philosophy, while specializing in Mathematics, Physics and Natural Sciences. It allows the development of scientific and technological research, ensuring the mastery of languages, techniques and methodologies, also through laboratory practice.

"Liceo delle Scienze Applicate" provides students with particularly advanced skills in studies related to science and technology, with particular attention to Mathematics, Physics, Chemistry, Biology

and Information Technology. The course guides the students through the learning of concepts, principles and scientific theories making use of experiments performed in the laboratory.

“Liceo Linguistico” gives the students the chance and tools to acquire the communicative mastery of three European languages (English, German; French) and to critically understand the historical and cultural identity of different traditions and cultures.

In the “Liceo Artistico” course students receive extensive preparation in the artistic disciplines, both theoretically and practically which gives them the knowledge to continue their studies in Architecture, Fine Arts, Design or Fashion.

“Liceo delle Scienze Umane “ is aimed at the study of the explanatory theories of phenomena related to the construction of personal identity, human and social relationships. It ensures mastery of languages, methodologies, and investigation techniques in the field of human sciences.

Our goals

In addition to all the projects already in progress in our school, we have decided to develop a European citizenship among our students enrolling for the EU programme Erasmus+ KEY 1. We have just received a positive answer from the National Agency for Education and we are really proud of it because we think it will be the right way to give great opportunities to our school, colleagues and most of all to our students.

Our main goals are for Erasmus+ Project 2021-2027

- Raise the standard of education in all subjects especially languages and STEM
- Promote the development of the SOFT SKILLS among our students
- Promote a long-life learning style among students/teachers
- Allow students to experience different cultures living a period in a global context
- Allow students in need to live an enriching experience
- Encourage students to live a long- term experience abroad
- Promote the development of teaching strategies mainly to teach CLIL

To reach our goals we wish to find a school which shares our objectives and wants to start a successful and profitable project with us.

We would like to organize a school visit for a class of 17-18-year-old students and we will be happy to host one of your classes. Spending 5-6 days in a foreign family is, in our opinion, the best way to meet another culture and become aware of the value of developing a real European culture.

We also would like to give one of our students the chance to spend a period of 5-6 months living in a family abroad, in order to widen his/her horizons, to develop different skills, to be in touch with different ways of studying at school. Moreover, we would like to give this opportunity to students that normally couldn't afford the expenses of such an experience.

We are confident you will meet our request. It would be a pleasure for us to establish a cooperative learning relationship with your school.

We look forward to hearing from you as soon as possible.
