

MYAA

MYAA is an international award winning architectural design practice providing architecture, interior, landscape and masterplanning. Operating through offices in London, Barcelona and Asia we design landmark buildings for discerning clients worldwide. We are passionate but we never lose sight of our client's needs and expectations.

We work in all sectors from technology focused Smart Cities to Residential Super-Blocks, Carbon Neutral Shopping Malls, University Campuses, Hospitality, Sports and Leisure and Cultural Buildings.

We have won The American Architecture Prize 2017 for the Best Cultural Project as well as the AAP Prize for Best Education Project and The AAP prize for The Best Institutional Project. We have been shortlisted for the RIBA International Prize and we recently won the World Architecture Festival Award for one of the Best Buildings in the World.

We are working on fantastic projects with great clients and our recent projects include a Residential Art District, a FIFA World Cup Stadium, Seafront Schemes and an Island Airport. We have worked on Carbon Neutral Retail Malls and LEED Platinum buildings and we are leaders in BIM technology for cost effective, time saving and sustainable construction

Our work has been covered by news outlets including The BBC, CNN and others and we have exhibited around the world including at The Venice Biennale, The Victoria and Albert Museum London and Dreamspace. We've lectured at Columbia University New York, London University and in Hong Kong and we're committed to research and development

How we think

Our aim is to create architecture through critical thinking supported by social and cultural analysis underpinned by research and data.

Our design process often leads us to question the myths that shape our cities and define our everyday lives. Recalibrating our interaction with buildings and inventing new and unexpected uses can lead to creative, smarter and sustainable cities with improved wellbeing for all citizens.

Our effort is predicated on the need to create a robust and dynamic public realm that provides the basis for vibrant cities emphasising the unique attributes of place through space.
