We are hiring an aspiring software developer intern

Who we are

We are an international team with interdisciplinary backgrounds in computer science, art, VR/AR, politics, etc, who seek to disrupt the MedTech industry. Our current big project is to continue developing the next version of our product in an international consortium. The technology is currently being tested in hospitals and we are eager to make it more sophisticated together with our partners, who are contributing with biosensors and augmented reality hardware.

What you will be doing

- Develop a web application that will improve the lives of many people around the globe
- Decide together with us how and what we develop
- Implement and test new features
- Optimize performance

What we are looking for

- Enthusiasm and talent for writing structured and beautiful code
- Interest or experience in Django, Android Studio, C#, and Unity
- Good communication skills in English
- Experience in version control (We are using Gitlab & Bitbucket)
- Interest to develop professionally and to learn new
- Experience in databases (MySql)

Our office is located in the centre of Copenhagen in a calm hub for companies working with welfare technology. The project scope is wide and therefore we have a possibility to try to tailor the tasks to suit your personal development. Please send us your CV, and a motivation letter. We will evaluate applications within a week and invite to interviews shortly after.
